## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 4/28/05 has been entered.

### ***Drawings***

2. The petition filed on 12/29/2003 to accept color photographs and color drawings under 37 CFR 1.84(a)(2) is granted and thus accepted by the examiner.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 57, 58, 62-67, 70-74, 79-85, 89-95, and 99-103 are rejected under 35 U.S.C. 102(b) as being anticipated by Hayakawa et al. (US 4,751,929).

In regard to claims 57, 58, 62-67, 72-74, and 79-82, Hayakawa teaches in Fig. 1 and in cols. 2-3, teaches a Doppler ultrasound system comprising an ultrasound transducer (1); an ultrasound receiver (5); an ultrasound transmitter (3); an ADC (8) converter circuit coupled to

the ultrasound receiver to quantize the echo signals received by the ultrasound receiver into digital sample values (col. 2, lines 35-45); and a processor (col. 3, line 65) coupled to the ADC circuit for processing the digital sample values to calculate blood flow data as a function of time for a plurality of locations along the ultrasound beam axis wherein the blood flow data is representative of blood flow detected along the ultrasound beam axis as a function of time (col. 1, line 10). Hayakawa further teaches the steps or structures for detecting Doppler signal power data; calculating mean or peak blood flow velocity data; (col. 3, line 65 - col. 4, line 11).

In regard to claims 70, 71, 83-85, 89-95, and 99-103, Hayakawa teaches all the limitations of the claimed subject matter including a quadrature phase detector (6) for generating quadrature vectors (Va, Vb, Vr, and Vi).

***Allowable Subject Matter***

5. Claims 59-61, 68, 69, 75-78, 86-88, and 96-98 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kim (US 4,800,891) teaches quadrature vector generators (316 and 318).
